

Jayden Phu

(626) 417-5067 • jaydentphu@gmail.com • Los Angeles, CA • jaydenphu.dev

Education

University of California, Los Angeles

Bachelor of Arts in Computer Science and Linguistics

Anticipated Graduation: June 2028

Experience

Moving Dentists Building Legacies

Yorba Linda, California

Lead AI Automation Engineer

May 2026 - Present

- Architected a centralized Notion CRM from scratch spanning 6 relational databases, creating a governed system of record for equipment sales, dental practice transactions, and customer relationships that AI agents read and write to.
- Built and deployed LLM agents that parse unstructured business inputs and execute tool calls through MCP and external APIs, autonomously maintaining 200 records and eliminating 10 hours of manual data entry weekly.
- Built four production retrieval-augmented agents that pull task-specific context and documented operating procedures at runtime, enabling agents to execute against current company knowledge instead of static prompts.
- Designed the AI onboarding and governance framework behind the retrieval layer, establishing guardrails and documented procedures so new agents run consistently and predictably in production.

Veris Ventures

Geneva, Switzerland

Software Engineering Intern

Jun 2024 - Jun 2025

- Evaluated emerging Web3 projects on tokenomics, smart contract security, and market potential to assess project feasibility and inform investment fund allocation.
- Built and deployed a Python bot that automates dealflow processing, replacing manual triage of incoming venture deals in cryptocurrency and blockchain startups.
- Integrated Telegram and Notion APIs using python-telegram-bot and notion-client, building a data pipeline that transforms and stores structured dealflow records in a Notion database.

Kode for Kids

Monterey Park, California

Founder, President

Aug 2022 - Jun 2024

- Founded free, in-person coding programs for underserved middle schoolers, addressing local gaps in accessible computer science education through small-group, collaborative sessions.
- Taught Python and Java fundamentals, guiding students from the first script to a working project of their own.
- Authored weekly lesson plans on emerging CS topics, organized community events, and ran outreach that grew the program to 100+ participants.

Building-u Nonprofit

St. John's, Canada

Coding Intern

Oct 2023 - Feb 2024

- Developed JavaScript applications using DOM manipulation to support educational resources for students.
- Collaborated with the team on a website migration to React and Bootstrap inside an existing codebase.
- Built a form validator, a CRUD employee management system, and an API-powered analytics dashboard.

Projects

Polymarket Trading Bot – [Github](#) | *Python, Telegram Bot API, web3.py, Polygon, Polymarket CLOB, asyncio*

- Developed a Telegram-native social trading platform that integrates Polymarket's API for trading real world events.
- Built a non-custodial wallet layer using per-user Polygon Safes with a separated signing service, so a compromised application node cannot move user funds, while users deposit and withdraw USDC directly in the Telegram bot.
- Built real-time social trading features with asyncio, including one-tap copy/fade trade execution, group broadcast cards, and clan leaderboards, using the Polymarket's Builders Program for fee-attributed order execution.

Skills

Languages: Python (Numpy, Pandas), Java, SQL, JavaScript/HTML/CSS, R, React (React.js), C++

Technical: Claude API, Claude Code, API Integration (RESTful, Web3), Blockchain Development (Polygon, Ethereum-compatible)
